PROFESSIONAL SUMMARY

Full-Stack Software Engineer specializing in secure application architecture, React, Next.js, and systems that handle sensitive data. Builds authentication and authorization workflows, secure APIs, data-access controls, and payment applications while minimizing exposure of sensitive information.

Applies tokenization, least-privilege access, secure credential management, environment isolation, and PCI-aware design throughout architecture, implementation, deployment, and maintenance. Completes monthly computer-based training (CBT) in information security and privacy, phishing and social engineering, regulatory compliance and AML principles, data protection, and workplace standards. Collaborates with application engineering, DevOps, data, product, security, and leadership through Slack, Jira, OneDrive, Confluence, and GitHub to identify risks early and turn compliance requirements into maintainable software.

TECHNICAL SKILLS

AI & Retrieval: RAG (retrieval-augmented generation), CAG (cache-augmented generation), cost-aware model usage, feature flags

Security & Auth: JWT, bcrypt, hashing, PCI compliance, white-hat pen-testing, canary tokens

Security Operations: Penetration testing and AI/LLM security assessment

Languages & Frameworks: JavaScript (ES6+), React.js, Node.js, Next.js, Gatsby.js, HTML5, CSS3, JSON

Backend & Data: REST APIs, GraphQL, PostgreSQL, MongoDB, MySQL, Vector databases

Styling & Layout: Flexbox, CSS Grid, Styled Components, Material Design, Bootstrap, Tachyons

CMS: Headless CMS, ExpressionEngine, WordPress API

Tools & Cloud: Vercel, Azure, GCP, Git, GitHub, Slack, JIRA, Confluence, OneDrive, Chrome Developer Tools, Postman, Agile/Scrum, AWS, Hasura, Netlify

UX/UI & Design: Figma, Sketch, Adobe Creative Cloud (Photoshop, Illustrator, InDesign, XD, After Effects), responsive design, accessibility, cross-browser testing

PROFESSIONAL EXPERIENCE

Software Engineer

February 2025 - Present

Capital One

Denver, Colorado / Remote

- Architect and implement full-stack web features using JavaScript, Node.js, and modern frameworks, with attention to performance, reliability, and security.
- Worked on Capital One Shopping as the partner network grew from 30,000 retailers to 100,000+ online retailers in a little over a year, per Capital One's 2026 materials.
- Perform systematic debugging, testing, and cross-browser troubleshooting to resolve rendering and functionality issues across device configurations.
- Built APIs and SQL queries to securely serve analytics, email, and verified customer data for multiple Capital One internal-tool functions.

Sr. Javascript Engineer

November 2021 - November 2023

Cooper's Hawk Winery and Restaurants

Downers Grove, IL

- Designed PCI-compliant payment forms for the ecommerce store and monthly wine club, integrating Bluepay iframes and captchas, supporting checkout that processed ~\$35M average yearly ecommerce GMV.
- The Wine Club had roughly 600,000 members during that period; based on publicly available membership pricing, that represents more than \$150 million in potential annual recurring membership billings at even the lowest membership tier.
- Built client-side and server-side validation with Zod, Yup, and JavaScript to block code injection and XSS while keeping forms easy to complete.
- Integrated API services, JSON feeds, and content tools to drive real-time data delivery across web channels.

Front End React / Full Stack Engineer

May 2019 - June 2021

IMS Integrated Merchandising Solutions

Morton Grove, IL

- Built reusable components for a multi-tenant application serving multiple client portals.
- Contributed to architecting a CMS that rearranged visual layouts based on which client signed in through the portal.
- Worked on the Smile Makers Online ecommerce platform, supporting payment and account-based purchasing for McDonald's branded merchandise across its U.S. restaurant network.
- Worked with enterprise nopCommerce, including a B2B payment system that charged the company card.

Software Engineer / Web Developer**October 2017 - March 2019***YMCA of Metropolitan Chicago**Greater Chicago Area*

- Maintained and enhanced digital marketing properties utilizing enterprise Content Management Systems (ExpressionEngine), PHP, JavaScript, and HTML/CSS.
- Translated UI/UX design assets created in Adobe Creative Suite into accessible, standards-compliant web pages.
- Implemented search engine optimization (SEO) best practices and API integrations to increase marketing reach and operational efficiency.

Freelance Web Developer & User Experience Designer**January 2013 - December 2019***Freelance / UX Design**Remote*

- Designed and built custom mobile-responsive web applications for client brands using JavaScript, Node.js, HTML5, CSS3, and CMS platforms.
- Executed end-to-end UX/UI workflows including user research, wireframing, and interactive prototyping using Figma, Sketch, and Adobe XD.

EDUCATION & CERTIFICATIONS**DePaul University** - Coursework in Human Computer Interaction (HCI)**Certifications:****January 2022 - February 2023**

- SoloLearn JavaScript Certification
- Node.js Developer Certification (Wes Bos)
